

STAR-HOPPING FINDER CHART 3: M13 & M92 (HERCULES GLOBULARS) — HERCULES

Location: Dvigrad (Bortle 4, SQM 21.0) | Sep 12, 2026 • 21:15 CEST | Sky-Watcher 200P Dobsonian (8-inch f/6, 1200mm FL) | B/W Toner-Saver Edition

VIEWPORT A: WIDE-FIELD STAR-HOPPING CHART (Upright Naked-Eye / Finder: N ↑, E ←)

VIEWPORT B: EYEPIECE SIMULATION (Negative Inverted 180°: N ↓, E →)

VIEWPORT C: TARGET DOSSIER & STAR-HOPPING INSTRUCTIONS

OBJECT DOSSIER: M13 (NGC 6205) & M92 (NGC 6341)

- Constellation: Hercules | Type: Globular Star Clusters
- M13: Mag 5.8V | Diameter: 20' (~145 light-years across)
- M92: Mag 6.3V | Diameter: 14' | Extremely ancient (~14 Gyr)
- Distance: ~22,200 ly (M13) / ~26,700 ly (M92)
- Tonight's Ephemeris at Dvigrad (Sep 12, 2026):
 - 20:00 CEST: Alt 65.4°, Az 248° (West, Superb & Steady)
 - 21:15 CEST: Alt 56.2°, Az 271° (Prime Contrast!)
 - 22:30 CEST: Alt 44.1°, Az 287° (Crisp before sinking)

EYEPIECE QUICK REFERENCE & OBSERVING NOTES:

- High Resolution (12.5mm / 96x): Mandatory! Core resolves into hundreds of glittering diamond points with spider-leg star chains.
- Propeller Feature: Search SE quadrant for faint dark 3-bladed 'Y'.
- M92 Bonus: Compact, intensely condensed nucleus; higher surface brightness than M13.

STEP-BY-STEP STAR HOP NARRATIVE:

1. Naked-Eye: Locate the Keystone trapezoid of Hercules.
2. West edge: Identify η Her (NW corner) and ζ Her (SW corner).
3. Hop: Move 2.5° South along the η-ζ line (1/3 the way down).
4. M13 glows clearly in finder and 20mm eyepiece!
5. Bonus M92: From π Her (NE corner), slew 6.3° due North.
