

# STAR-HOPPING FINDER CHART 3: M13 & M92 GLOBULAR CLUSTERS — HERCULES

Location: Dvigrad (Bortle 4, SQM 21.0) | Sep 12, 2026 • 21:15 CEST | Sky-Watcher 200P Dobsonian (8" f/6, 1200mm FL) | B/W Toner-Saver Edition

VIEWPORT A: WIDE-FIELD STAR-HOPPING CHART (Upright Naked-Eye / Finder Orientation: N ↑, E ←)

VIEWPORT B: TELESCOPE EYEPIECE SIMULATION (Negative Inverted 180°: N ↓, E →)

12.5mm Eyepiece (96× Magnification, 31' True FOV)  
VIEWPORT C: TARGET DOSSIER & STAR-HOPPING INSTRUCTIONS

OBJECT DOSSIER: M13 (NGC 6205) & M92

- Constellation: Hercules | Type: Globular Cluster
- Magnitude: 5.8V | Surface Brightness: 11.9 mag/arcmin<sup>2</sup>
- Apparent Size: 20' diameter | Stars: ~300,000 | Dist: 22,200 ly
- Tonight's Ephemeris at Dvigrad (Sep 12, 2026):
  - 20:00 CEST: Alt 69.3°, Az 256° (High West)
  - 21:15 CEST: Alt 56.2°, Az 271° (Prime Observing!)
  - 22:30 CEST: Alt 43.1°, Az 283° (Well Above Trees)

OBSERVING STRATEGY & EYEPIECES:

- Finder (20mm / 60×): Bright, glowing snowball of light framed beautifully by two 7th-magnitude field stars.
- Target (12.5mm / 96×): Mind-blowing resolution! In the 8" Dobsonian, the cluster bursts into hundreds of sparkling star pinpricks with spider-like arms radiating outwards.
- Challenge: Spot the 3-bladed 'propeller' lane near the core.

STEP-BY-STEP STAR HOP NARRATIVE:

1. Naked-Eye: Locate the Keystone of Hercules in the West.
2. Western side:  $\eta$  (NW corner) and  $\zeta$  (SW corner).
3. Slew Telrad / Finder: Move along the line from  $\eta$  toward  $\zeta$ ; M13 sits exactly 1/3 of the way down.
4. Bonus M92: From  $\pi$  Herculis (NE corner), hop 6.2° due North.
