

STAR-HOPPING FINDER CHART 3: M13 & M92 GLOBULAR CLUSTERS — HERCULES

Location: Dvigrad (Bortle 4, SQM 21.0) | Sep 12, 2026 • 21:15 CEST | Sky-Watcher 200P Dobsonian (8-inch f/6, 1200mm FL) | B/W Toner-Saver Edition

VIEWPORT A: WIDE-FIELD STAR-HOPPING CHART (Upright Naked-Eye / Finder: N ↑, E ←)

VIEWPORT B: EYEPIECE SIMULATION (Negative Inverted 180°: N ↓, E →)

12.5mm Eyepiece (96x Magnification, 31' True FOV)

VIEWPORT C: TARGET DOSSIER & STAR-HOPPING INSTRUCTIONS

OBJECT DOSSIER: M13 (NGC 6205) & M92

- Constellation: Hercules | Type: Globular Clusters
- M13: Mag 5.8V | Size: 20' | Stars: ~300,000 | Dist: 22,200 ly
- M92: Mag 6.3V | Size: 14' | Extremely dense compact core
- Tonight's Ephemeris at Dvigrad (Sep 12, 2026):
 - 20:00 CEST: Alt 69.3° | 21:15 CEST: Alt 56.2° (Prime!)
 - 22:30 CEST: Alt 43.1°, Az 283° (Well Above Trees)

EYEPIECE QUICK REFERENCE & OBSERVING NOTES:

- Wide-Field / Finder (20mm / 60x): Glowing snowball framed beautifully by two 7th-magnitude field stars.
- Resolution (12.5mm / 96x): Bursts into hundreds of sparkling pinpricks with spider-like radiating arms.
- Propeller Lane: Dark 3-bladed silhouette near M13 core.

STEP-BY-STEP STAR HOP NARRATIVE:

1. Naked-Eye: Locate the Keystone of Hercules in the West.
2. Western side: η (NW corner) and ζ (SW corner).
3. Slew Telrad / Finder: Move along the line from η toward ζ; M13 sits exactly 1/3 of the way down.
4. Bonus M92: From π Herculis (NE corner), hop 6.2° due North.
