

STAR-HOPPING FINDER CHART 6: M11 (WILD DUCK CLUSTER) & SATURN — SCUTUM / AQUARIUS

Location: Dvigrad (Bortle 4, SQM 21.0) | Sep 12, 2026 • 21:15 CEST | Sky-Watcher 200P Dobsonian (8-inch f/6, 1200mm FL) | B/W Toner-Saver Edition

VIEWPORT A: WIDE-FIELD STAR-HOPPING CHART (Upright Naked-Eye / Finder: N ↑, E ←)

VIEWPORT B: TELESCOPE SIMULATIONS (Negative Inverted 180°: N ↓, E →)

VIEWPORT C: TARGET DOSSIER & STAR-HOPPING INSTRUCTIONS

OBJECT DOSSIER: M11 & SATURN

- M11 Wild Duck: Constellation Scutum | Open Cluster
 - Magnitude: 5.8V | Size: 14' | Distance: 6,200 ly
 - Stars: ~2,900 stars (one of the richest known!)
 - Ephemeris: 20:00 Alt 38.2° | 21:15 Alt 37.7° | 22:30 Alt 32.0°
- Saturn: The Ringed Planet in Aquarius/Pisces
 - Magnitude: +0.6 | Apparent Disk: ~19" (Rings: ~43")
 - Ring Tilt: Shallow (~2° edge-on profile in late 2026!)
 - Rising Schedule at Dvigrad (East-Southeast):
 - 20:20 CEST: Rises above horizon
 - 21:40 CEST: Clears 15° tree line (Alt 15.2°)
 - 22:30 CEST: Peak party altitude (Alt 22.8°, Az 111°)

OBSERVING STRATEGY & EYEPIECES:

- M11 (12.5mm / 96×): Incredible! Resolves a dazzling swarm resembling a flight of wild ducks in V-formation, anchored by a 8th-magnitude star near the apex.
- Saturn (12.5mm / 96×): Grand finale of the night (observe from 21:45 to 22:30)! The knife-edge rings, sharp shadow on the globe, and radiant orange moon Titan make a sublime view.

STEP-BY-STEP STAR HOP NARRATIVE:

- M11: Locate Altair. Slew 14° South down Aquila's backbone to λ Aquilae (mag 3.4). Slew 4.5° WSW into the Scutum cloud.
- Saturn: Look low in the ESE after 21:40 CEST. Identify the brightest golden non-twinkling object below Pegasus!
